

WEBT-VT | ADV | Responsive Websites with SASS

Definition of Done

A user story is considered **Done** when all of the following criteria are met:

- All acceptance criteria for the user story are fully implemented and verified
- The implementation has been tested and verified to work correctly
- No errors, warnings, or broken functionality are introduced by the implementation
- The solution is maintainable: changes are implemented in an extendable way and avoid unnecessary duplication
- Documentation is updated to reflect any new setup steps, configuration changes, or usage notes

User Story 1

As a Developer I want to install a node.js module of my choice or use plain node.js, so that I can compile SASS files

Acceptance Criteria

- The frontend build chain features a SASS compiler
- The SASS compiler is used for generating the CSS for the responsive framework of your choice, respecting custom color variables

User Story 2

As a Developer I want to install a responsive framework of my choice, so that I save worktime.

Acceptance Criteria

- A responsive framework of the developers choice is ready for the frontend development stack
- The responsive framework can be updated without overwriting changes made to the styles

User Story 3

As a website user I want the website to adapt to my device size, so that I can view the content in the most convenient way.

Acceptance Criteria

- The website is responsive for mobile phones
- The website is responsive for tablets
- The website is responsive for desktop computers (16:9 and 16:10)
- All elements of the website are designed in a responsive way
